Portland, Jamaica

Summary

I have a deep passion for learning and building customer-focused web experiences using the latest available web technologies. I love the challenge of working with, and discovering new technologies. I look forward to a professional opportunity to flex both my current skills and adaptability to new environments.

Experience

Software Engineer

Microsoft • Vancouver, British Columbia

01/2019 - 07/2023

I started working at Microsoft right after college and worked across a few teams, projects and features. These included:

OneNote Online

While on the OneNote Online team I worked on several features and projects. I worked on,

- implementing page-level search for notebooks;
- adding page-level at-mentions;
- numerous bug fixes and customer issues.

Azure Communication Services

I also worked on several projects and features while on the Azure Communication Services team. These included:

- Developing and publishing the first versions of @azure/communications-phone-numbers and @azure/communication-sms, including documentation and guides;
 - Helping to develop and publish @azure/communication-short-codes after I had switched teams and stopped working on sdks;
 - Researching, designing and developing Microsoft's media composition layout solution to give developers live media composition capabilities through Azure. This involved working across multiple teams, coordinating and even helping out with parts of the product that were not directly covered by my team.
-

Skills

JavaScript, TypeScript, C#, .NET, React.js, Node.js, Git, Azure, HTML, CSS

Education

Computer Science

Claflin University • Orangeburg, SC

05/2017
